Subject	GlassesUSA × AI shopping agents: your first audit + a 20-min review

Hi [Name],

We tested how ChatGPT, Perplexity and Gemini find, describe and sell GlassesUSA. Good news first: agents trust you as a store. GlassesUSA was named in 9 of 9 answers to “where to buy prescription glasses online”, often as “Best overall”.

Three things are holding back sales from these agents:

1. They don’t recommend your products. You were named in 0 of 9 running-sunglasses answers and 0 of 3 blue-light answers, even though you sell the frames agents pick.
2. They can’t see the real price. An Rx Wayfarer costs $215.50 with lenses, but that total sits inside the lens configurator; 0 of 6 agent answers stated a complete price.
3. The buy step breaks. Asked to buy one exact Wayfarer, 2 of 3 agents linked a different listing at a different price.

The first fixes are content and configuration, with no replatforming, and we can measure the change in 30 days.

The full audit is attached. Could we take 20 minutes this week to walk through it and agree on owners?

Best,
[Your name]
