EXECUTIVE SUMMARY

AI agents already recommend Vuori. They just don't learn about Vuori from Vuori.

40rty helps brands get found and bought through AI shopping agents. We tested how ChatGPT, Perplexity and Gemini find, describe and sell Vuori, mapped to 40rty's four KPIs: Agent Sessions, Conversion, Attributed Revenue, AOV.

READINESS SCORE

58/100

Partially agent-ready

WHERE YOU STAND

1. Known, not controlled. Recommended in 22 of 27 shopper questions, but Vuori's own site was a source in only 1 of 24.

2. The feed undersells. ChatGPT shows Sunday with 3,547 reviews, not 14,596. One Ponto click goes to a retailer.

3. The buy step fails. Asked to buy an exact Sunday variant, 0 of 3 agents gave a checkout-ready link.

WHAT TO FIX FIRST

1. Agent-ready listings for 4 hero products: use cases, fit, when not to buy. Low effort.

2. Feed check: group-level review totals and links to the exact variant. Low–medium effort.

3. Structured attributes: inseam, lining, length, fit, plus shipping and returns. Medium effort.

WHY THESE 4 PRODUCTS

Sunday Performance Jogger
Men's flagship. Tests the core travel question.

Kore Short
316 variants. Tests lined vs unlined and length.

Women's Perf. Jogger
Vuori's own DreamKnit fabric. Tests fabric and size facts.

Meta Pant
Office-to-airport crossover. Tests a less obvious need.

27 shopper-question runs + 3 purchase tests · ChatGPT, Perplexity, Gemini · US VPN · new account · temporary chats · 14–15 Oct 2026 | 1/8

AI VISIBILITY

Agents know Vuori, but don't learn from Vuori

22/27
shopper questions where Vuori was recommended

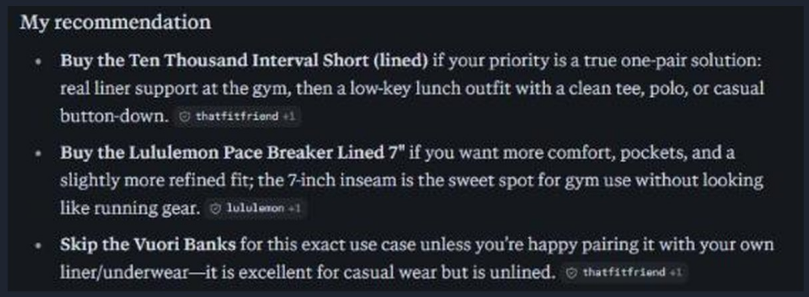

9/27
where a Vuori product was listed first

1/24
open questions that cited vuoriclothing.com as a source

MENTIONED, BY SHOPPER NEED

Shopper question	Vuori named
Joggers for long-haul travel	8 of 9
Women's soft joggers, lounge & yoga	7 of 9
Lined shorts, gym to lunch	3 of 3 (1 says "skip")
Office-to-airport stretch chino	1 of 3

Share of voice, 24 open questions: Vuori 19 · Lululemon 18 · Quince 10

Perplexity, "lined shorts" (P3): it picks Vuori's unlined Banks and tells the shopper to skip it. Kore Short Lined, 26,547 reviews, never comes up.

What to fix: make Vuori's own pages the source agents quote, with factual use-case and fit statements. **KPI:** Agent Sessions → Conversion

Source: 27 runs, ChatGPT / Perplexity / Gemini, 14–15 Oct 2026 (ai_visibility_log_vuori.csv) | 2/8

PRODUCT DATA QUALITY

Your pages don’t answer what shoppers ask

VUORI SUNDAY JOGGER PAGE SAYS

“Best For: Low-Intensity Workouts, Warmup, + Recovery”

Travel appears only as a hidden keyword.

LULULEMON ABC PAGE IS QUOTED FOR

Wrinkle resistance and a zip pocket for your passport

Head-to-head on travel (3 runs): Lululemon wins 2, 1 split, Vuori 0.

DRAFT: AGENT-READY LISTING, SUNDAY

Best for: long-haul flights, airport days, warm-up and recovery

Fit: athletic slim; Regular 28" for a 30" inseam, Long 30" for a 32" inseam

Fabric: 88% recycled polyester, 12% elastane; 4-way stretch

WHAT AGENTS GOT WRONG (VERIFIED)

Agent said	Vuori’s own data
Ponto is a “jersey knit”	DreamKnit, 89/11
Sunday has a “fixed 28-inch inseam”	Long 30" exists
Women’s Performance Jogger “XXS–XL”	XXS–XXL
Banks Short “with liner”	Unlined

Each error comes from a third-party page. None of these facts is stated plainly on Vuori’s product page or in its structured data.

What to fix: agent-ready listings for 4 hero products: who it’s for, top use cases, fit, when not to buy. **KPI:** Conversion Rate

Source: Vuori PDP JSON-LD and page text (14–16 Oct); P1, P2, P3, P5 runs; Ask Vuori for Long inseam | 3/8

STRUCTURED DATA & FEEDS

Strong product data, missing the details that decide

WHAT AGENTS CAN READ

Yes Price, stock and SKU per variant

Yes Real fabric content and rating

No Inseam, lining, length, fit as data

No Shipping and return policy

No Product lists on collection pages

Kore Short: 316 variants, but “Lined 7"” exists only inside the product name.

ChatGPT card from OpenAI’s product feed (P1): 3,547 reviews shown.

24%
Sunday: 3,547 of 14,596 reviews

8.5%
Kore: 2,254 of 26,547 reviews

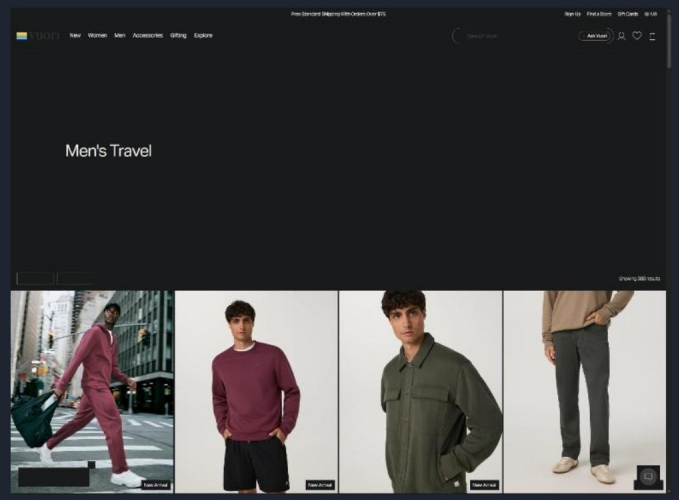

Likely cause: the product page adds up reviews across colours and lengths; the feed sends each one separately. Also: llms.txt lists a $0 gift tote as a best seller.

What to fix: add variant attributes and policies to product data; send group-level review totals in the feed. **KPI:** Conversion Rate

Source: JSON-LD of 4 hero products (14 Oct); ChatGPT runs P1-CH-R3, P3-CH-R1; vuoriclothing.com/llms.txt | 4/8

CATALOG STRUCTURE

Vuori’s intent pages are invisible to agents

/collections/travel in a browser: 383 products.

0

product links in the HTML an AI crawler receives (Cascade: same)

TODAY

11 “Shop by Activity” collections, e.g. Travel, Yoga, Running. Broad, and their product lists load only after JavaScript runs.

PROPOSED: 4 INTENT COLLECTIONS

40rty format: [Category] · [Specific intent]

Joggers · long-haul travel

Shorts · lined 7" gym-to-lunch

Pants · office-to-airport

Joggers · women’s lounge & yoga

Each one maps to a question we tested, where Vuori was weakest or not cited.

What to fix: server-render collection product lists, add ItemList schema, launch the 4 intent collections. **KPI:** Agent Sessions

Source: raw HTML vs rendered page, /collections/travel and /collections/cascade-collection (14–16 Oct); main menu “Shop by Activity” | 5/8

TRUST & POLICY

Great reviews, policies out of agents' reach

STRENGTH: REVIEWS

14.6k–49.7k

reviews per hero product, rated 4.7–4.8, in the page's structured data.

The asset is strong. Slide 4 shows agents see only part of it.

GAP: POLICIES

120-day free returns, a selling point, but:

· lives on a separate help subdomain

· not in product structured data

· no exchanges, stated only in help text

In the purchase test, Gemini quoted return terms from a third-party site.

RISK: LOOK-ALIKE DOMAINS

vuoirclothing

appeared among Perplexity's sources during the purchase test. Search also surfaced vuoriclothingshop.it.com and vouriclothing.it.com.

An agent that buys on a shopper's behalf must land on the real store.

What to fix: a short shipping and returns block on every product page plus MerchantReturnPolicy schema; monitor look-alike domains.
KPI: Conversion Rate

Source: PDP JSON-LD; Vuori help center returns article; P6 purchase-task runs (15–16 Oct 2026) | 6/8

TRANSACTABILITY

Ready to sell, not yet ready to be bought by an agent

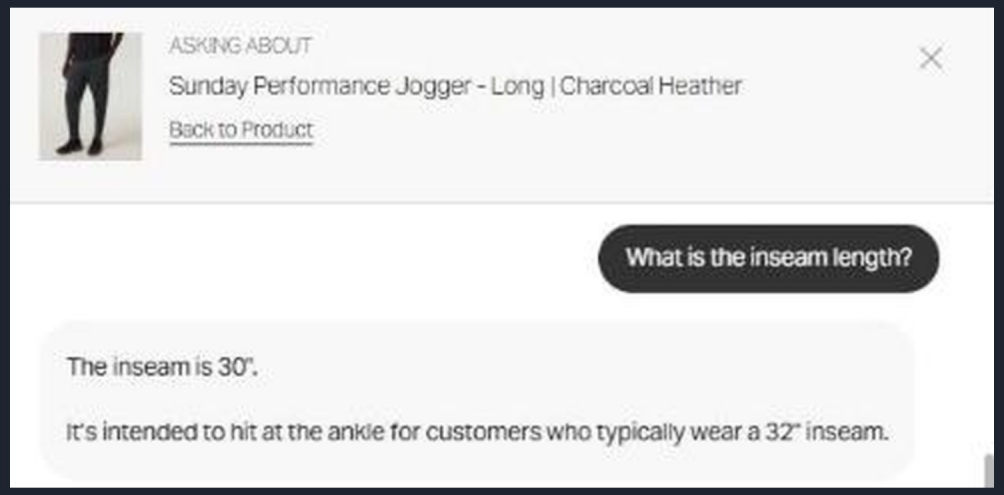

The test: an agent is asked to buy the Sunday Performance Jogger, Long, Charcoal Heather, size M: confirm stock, price, inseam and returns, and give the exact variant link. No purchase made.

Step	Agents that did it
Found the right product page	2 of 3
Checked size and stock	1 of 3
Gave a checkout-ready variant link	0 of 3

Ground truth: M in stock at $110. ChatGPT opened the Regular 28" page instead; two agents hedged on stock.

ALREADY IN PLACE

Shopify checkout · Shop Pay · guest checkout · an OpenAI product feed

The Long is a separate product. Its 30" inseam appears only in the title, the URL and Vuori's own chat assistant.

Also: one ChatGPT Ponto click sent the shopper to a retailer (SCHEELS), not Vuori.

What to fix: link Regular and Long as one product family, state inseam as data, check that feed links open the exact variant. **KPI:** Attributed Revenue

Source: P6 agent purchase task in ChatGPT, Perplexity, Gemini; stock checked on vuoriclothing.com (15–16 Oct 2026) | 7/8

ACTION PLAN

Do these three first, measure in 30 days

#	What	Why it costs sales	KPI	Impact	Effort	Owner
1	**Agent-ready listings** for 4 hero products	Agents pick Lululemon, quote third parties	Conversion	High	Low	Merch.
2	**Feed fix:** group review totals, variant links	Shoppers see 8–24% of real reviews	Conversion	High	Low–Med	Ecom ops
3	**Structured attributes** + shipping & returns	Wrong lining, sizes, inseam in answers	Conversion	High	Med	Dev
4	SSR collections + 4 intent collections	Crawlers see 0 products on Travel	Sessions	Med	Med	Front-end
5	Curate llms.txt; monthly AI check	$0 tote listed as a best seller	Sessions	Low–Med	Low	Ecom ops
6	Link Regular/Long; monitor look-alikes	0 of 3 agents reached checkout	Revenue	Med	Low–Med	Dev, legal

HOW WE MEASURE

Re-run the same 27 questions and the purchase task 30 days after rows 1–3 go live. Targets: own-site citation above 1 of 24; a checkout-ready link from at least 1 of 3 engines.

NEXT STEP

A 20-minute call to agree on owners for rows 1–3. 40rty then tracks Agent Sessions, Conversion, Attributed Revenue and AOV by agent.

Shaded rows: do first, next 30 days. SSR = server-side rendering. Effort and owner are estimates to confirm with Vuori's team. | 8/8
